6 注意事项 Notes

6.1 应用说明 Application Description

6.1.1 为防止出现松动，接触器安装时请使用平垫和弹垫。To prevent loosening, use flat and elastic pads when installing the contactor.

6.1.2 接触器引出脚允许的插拔力为：（1）负载引出端 49N，（2）线圈引出端 49N。在超过范围的情况下，可能会造成破损。Allowable pulling or pushing force for the terminal:(1)load terminal 49N;(2)coil terminal 49N. Damage may occur when it is beyond the range.

6.1.3 PCB 板焊接参数为：手工焊（ 380 ± 20 ）℃，时间（3~5）s；波峰焊（ 265 ± 5 ）℃，时间（3~5）s。PCB welding parameters: manual welding (380 ± 20) °C,time (3~5) s;wave soldering (265 ± 5) °C,time (3~5) s.

6.1.4 接触器使用在 $L/R \geq 1\text{ms}$ 感性负载（L 负载）的情况下，请注意采取并联浪涌吸收措施。否则可能会造成电气寿命下降、发生切断不良。When the contactor is used at $L/R \geq 1\text{ms}$ inductive load (L load), please take parallel surge absorption measures. Otherwise, it may cause a decrease in electrical life and bad cutting.

6.1.5 接触器使用在容性负载的情况下，请注意采取预充等措施，建议接触器闭合压差控制在 20V 以内。未采取措施的情况下，可能会造成触点粘连。When the contactor is used with a capacitive load, take measures such as pre-charging, and it is recommended that the closing pressure difference of the contactor be controlled within 20V. Otherwise, it may cause contact fusion welding.

6.1.6 不带节能板的产品，为抑制接触器线圈的反向电动势，建议加装压敏电阻或 TVS 管。若使用二极管，会使接触器释放时间大大加长，肯定会导致切断性能的下降。For products without an energy-saving plate, it is recommended to install a varistor or TVS tube to suppress the reverse electromotive force of the contactor coil. If the diode is used, the contactor release time will be greatly extended, which will certainly lead to a decline in cutting performance.

6.1.7 本接触器的内部触点使用了气体保护，伴随着触点温度变化（环境温度+通电致使温度上升）而存在内部气体穿透，严禁将接触器长时间置于超过产品温度使用范围（ $-40\text{ }^{\circ}\text{C} \sim 85\text{ }^{\circ}\text{C}$ ）环境中。The contactor contacts are sealed and filled with gas. When the contact temperature changes, there is internal gas penetrating characteristic. contactors are forbidden to be used at the temperature beyond our suggestion $-40\text{ }^{\circ}\text{C} \sim 85\text{ }^{\circ}\text{C}$ for long time.

6.1.8 请避免在强磁界（变压器、磁铁的周围）的附近安装，否则可能造成接触器电气性能和切断性能不良；Please avoid installation near the strong magnetic boundary (around the transformer and magnet), otherwise it may cause poor electrical performance and cutting performance of the contactor;

6.1.9 请避免在发热物体（如熔断器、分流器等）的附近安装，否则可能导致温升叠加接触器触点端过热。Do not install in the vicinity of hot objects (such as fuses, diverters, etc.); otherwise, the contact end of the temperature rise supercontactor may overheat.

6.1.10 请避免在引出片上粘附油脂等异物，使用 15mm² 以上规格的连接导线，否则有可能会造成引出端部分的异常发热。Please avoid grease and other foreign matter in the terminal, please use the connecting wire with a cross section area $\geq 15 \text{ mm}^2$, or they may cause overheating to the terminal part .

6.1.11 在接触器坠落的情况下，原则上请不要再使用。In principle, please do not use it when the contactor has fallen down.
